Description

Vifor pharma is the world number 1 producer of intravenous iron, a category used against anemia, mostly in connection to dialysis. The firm aims at expanding the treatment of anemia in other contexts such as cancers, cardiac and gastro conditions and women's health.

In 2016, Viphor Pharma took over US based Relypsa, a firm that has developped Veltassa, a new drug against hyperkalemia, a condition characterized by an excess of potassium. Patients undergoing dialysis are the prime target.

Moreover, the firm has entered several distribution agreements, for example with Roche for Mircera, which lead to a better use of its distribution network.

Investment case

The iron market should remain a growth engine in the coming years. The success of the firm's strategy depends on its ability to convince the medical community of the advantages of intravenous iron beyond its traditional use in dialysis. In Switzerland, the firm has already been able to considerably expand its iron sales in applications like surgery, obstetrics, gastroenterology and oncology. It aims at reproducing these successes in other geographies.

With Veltassa, Viphor Pharma is confronted with the challenge of convincing the medical community to adopt a new approach against hyperkalemia, a condition which has been inadequately treated up until now. The risk is high, but so is the potential reward. In the short term, Veltassa is loss making.

Strengths

- Proven success of the approach in intravenous iron

- World leader in intravenous iron

Weaknesses

- Dependence on 2 lines of products: the intraveinous iron and the potassium treatment

Opportunities

- The niches of intravenous iron and potassium reduction seem very promising

- The company would be a take-over candidate

Threats

- Development of generic irons.
- Unability to developp a sizeable market for Veltassa.
